Question: 1

What should you do if you modify the input or output arguments of your agent after creating evaluation sets?

A. Only update the agent, not the evaluations.
B. Adjust the evaluations to align with the new arguments to ensure continued validity and coverage.
C. Leave the evaluation sets unchanged, since they are independent of agent arguments.
D. Delete all evaluation sets and start over. Because the previous evaluations are linked with the old input/output arguments.

Answer: B

Question: 2

Which of the following is NOT a recommended best practice for prompt engineering?

A. Being specific and concise
B. Including context and format requirements
C. Testing and iterating prompts for improvement
D. Using ambiguous language to keep flexibility

Answer: D

Question: 3

Which UiPath service is used to create connections to external applications for agents?

A. Test Manager
B. Integration Service
C. Insights
D. AI Center

Answer: B

Question: 4

What is a zero-shot prompt?

A. A prompt with no training data behind it
B. A prompt that gives instructions without providing examples
C. A prompt that always requires escalation
D. A prompt that references previous outputs

Answer: B

Question: 5

Your client asks you to configure an LLM to answer general trivia questions (e.g., "Who is the current president of France?"). You don't include examples of correctly formatted answers in your prompt, but you expect the model to return concise and accurate responses.
What approach should you choose for this task?

A. Chain of thought prompting
B. Few-shot prompting
C. Zero-shot chain of thought prompting
D. Zero-shot prompting

Answer: D

Question: 6

Which of the following BEST represents an agent goal?

A. "Extract invoices from a folder"
B. "Open the CRM system"
C. "Start the automation workflow at 10 AM daily"
D. "Ensure financial reports are submitted by the 5th of each month"

Answer: D

Question: 7

Which storage mechanism can be used as a context source for grounding?

A. Orchestrator queues
B. Storage buckets
C. Robot logs
D. UiPath Studio templates

Question: 8

Which of the following is MOST important when designing prompts?

A. Using vague instructions to allow flexibility
B. Including context, instructions, output format, and constraints
C. Limiting prompts to single-sentence commands
D. Avoiding references to external knowledge sources

Answer: B

Question: 9

Why is context awareness important for an agent compared to a robot?

A. Agents require context to adapt decisions dynamically.
B. Robots cannot function without full data context.
C. Context ensures robots can perform repetitive tasks faster.
D. Context awareness eliminates the need for orchestration tools.

Answer: A

Question: 10

What enables Generative AI to produce content across diverse formats such as text, audio, and 3D elements?

A. Generative AI's output versatility is primarily driven by pre-programmed rules specific to each individual content format.
B. Generative AI relies on deep learning models designed to learn patterns and structures from varied datasets encompassing multiple data types.
C. The ability to handle multiple formats comes from a unique algorithm hand-coded to create outputs across all content types seamlessly.
D. Generative AI's ability to produce content across formats stems solely from its capacity to repurpose previously generated outputs, rather than understanding or processing patterns in the data itself.

Answer: B
