Latest Version: 6.0

Question: 1

Which element does Insight Advisor rely on when translating a user's natural-language query into a chart?

- A. Script-level variable definitions
- B. Associations, field roles, and metadata
- C. AutoML model endpoints
- D. RAG document ingestion

Answer: B

Question: 2

What is one advantage of machine learning models compared to manually crafted decision rules?

- A. They guarantee perfect interpretability
- B. They require no data for training
- C. They automatically adapt to new patterns in data
- D. They eliminate the need for evaluation

Answer: C

Question: 3

Which capability allows Qlik AutoML to help users understand how specific inputs affect a prediction?

- A. Explainability charts such as SHAP values
- B. Prediction caching
- C. RAG context injection
- D. Notebook-based scripting

Answer: A

Question: 4

During LLM app development, which step helps ensure better alignment with user intent?

- A. Increasing model size indefinitely
- B. Iterating and testing improved prompt designs
- C. Removing all contextual data
- D. Completely avoiding fine-tuning

Answer: B

Question: 5

Which statement describes a key limitation of GenAI for enterprise use?

- A. It cannot generate any structured outputs
- B. It only works with supervised learning
- C. It cannot summarize long documents
- D. It may produce inconsistent or fabricated details

Answer: D

Question: 6

What role does a Large Language Model (LLM) primarily play within the broader domain of artificial intelligence?

- A. Understanding and generating human-like natural language
- B. Performing supervised classification using labeled tabular datasets
- C. Managing automated data pipelines and ETL jobs
- D. Rendering visualizations directly from structured data sources

Answer: A

Question: 7

Why are embeddings essential for semantic search?

- A. They match documents based solely on exact keywords
- B. They compress data for faster network transfers
- C. They provide vector representations enabling similarity scoring
- D. They enforce deterministic query results

Answer: C

Question: 8

Which business challenge is commonly encountered when integrating AI into existing data pipelines?

- A. AI requires no data preparation
- B. AI workloads never require cloud resources
- C. Models automatically update without supervision
- D. Latency and scalability constraints

Answer: D

Question: 9

Which output is commonly produced by Qlik AutoML after model training?

- A. Feature importance scores
- B. RAG retrieval logs
- C. NLP embeddings
- D. Insight Advisor narrative summaries

Answer: A

Question: 10

In the Qlik AutoML workflow, which step typically occurs after feature engineering but before model deployment?

- A. Gathering user feedback
- B. Hyperparameter tuning
- C. Creating insight briefs
- D. Integrating LLM prompt templates

Answer: B
