Question: 1

You receive an error that a required field value is missing during Data Deploy. What should you review?

A. The branching strategy
B. The Data Template fields
C. The pipeline stage mapping
D. The Commit Grid filters

Answer: B

Question: 2

How does the Commit Grid determine whether a component is "New"?

A. By comparing the component with Git history
B. By checking the last modified date
C. By reading Data Deploy logs
D. By checking destination org metadata

Answer: A

Question: 3

What does Copado do when a component is renamed?

A. Ignores the rename
B. Commits metadata without tracking rename
C. Treats the rename as a delete + new component
D. Deletes it from both org and Git

Answer: C

Question: 4

Why must the target branch exist in Git before deploying metadata into it?

A. Copado must commit metadata to an existing branch reference
B. Salesforce requires pre-existing branches
C. Copado cannot create branches automatically
D. The Commit Grid relies on destination branch metadata

Answer: A

Question: 5

A commit appears to include fewer components than expected. What should you check first?

A. The Data Deploy template
B. The pipeline's target org
C. Git branch write permissions
D. Commit Grid filters

Answer: D

Question: 6

In the Commit Grid, a metadata component marked as "Modified" indicates:

A. It has changed in the source org since last commit
B. It was changed in the destination org
C. It has been deleted from the source org
D. It conflicts with the main branch

Answer: A

Question: 7

Which actions help ensure accurate commit selections?
(Choose two)

A. Using metadata type filters
B. Disabling branch protection
C. Refreshing metadata before commit
D. Selecting components from all categories manually

Answer: A,C

Question: 8
