Question: 1

Which statement best describes one operational purpose of SDSF?
Response:

A. It lets operators view and manage JES jobs, output, and system-related work.
B. It lets operators view and manage Db2 packages, plans, and SQL-related work.
C. It lets operators view and manage RACF users, groups, and password-related work.
D. It lets operators view and manage VTAM nodes, routes, and session-related work.

Answer: A

Question: 2

Which option ensures HASPPARM data set errors do not prevent JES2 from starting?
Response:

A. Have all statements with system symbolics in a member
B. Have all statements in one member for each MAS member
C. Use a concatenated DD with multiple data sets and members
D. Use a single data set and member with INCLUDE statements and system symbolics

Answer: D

Question: 3

Which statement best describes a SYSRES cloning goal?
Response:

A. It creates a cloned system-residence environment that can support another bootable z/OS image.
B. It creates a cloned package-residence environment that can support another Db2 subsystem.
C. It creates a cloned profile-residence environment that can support another RACF database.
D. It creates a cloned route-residence environment that can support another VTAM domain.

Answer: A

Question: 4

Which two (2) are available as z/OS optional features?
Select all that apply
Response:

A. z/OS Management Facility
B. Integrated Security Services
C. Hardware Configuration Manager
D. Resource Access Control Facility
E. Hardware Configuration Definition

Answer: C,D

Question: 5

Which statement best describes the purpose of APF authorization?
Response:

A. It identifies libraries whose programs may perform authorized system functions.
B. It identifies libraries whose jobs may bypass JES scheduling functions.
C. It identifies libraries whose users may bypass RACF password functions.
D. It identifies libraries whose routes may bypass VTAM validation functions.

Answer: A

Question: 6

Which statement best describes the role of CF links in a z/OS environment?
Response:

A. They provide coupling-facility signaling connectivity used by Parallel Sysplex functions.
B. They provide SQL package connectivity used by Db2 static bind functions.
C. They provide RACF profile connectivity used by SAF authorization functions.
D. They provide JES spool connectivity used by SYSOUT scheduling functions.

Answer: A

Question: 7

Which statement best describes a portable software instance in z/OSMF software management?
Response:

A. It is a packaged software instance that can be deployed through z/OSMF workflows and software-management functions.
B. It is a packaged JES instance that can be deployed through initiator workflows and spool-management functions.
C. It is a packaged RACF instance that can be deployed through profile workflows and security-management functions.
D. It is a packaged VTAM instance that can be deployed through route workflows and network-management functions.

Answer: A

Question: 8

Which exam objective is most directly tested by a question that asks a candidate to start or stop subsystems, apply spool policies, manage APF or link-list settings, build JCL, run utility batch jobs, and choose scheduling controls?
Response:

A. It tests the ability to understand and administer z/OS job-management fundamentals.
B. It tests the ability to understand and administer z/OS job-management fundamentals.
C. It tests the ability to understand and administer z/OS device-configuration fundamentals.
D. It tests the ability to understand and administer z/OS networking fundamentals.

Answer: A

Question: 9

Which statement best describes one portability advantage of a REXX exec over a CLIST?
Response:

A. It can run in TSO/E and in other environments because part of the language is environment-independent.
B. It can run only in JES because the language is tied directly to spool services.
C. It can run only in RACF because the language is tied directly to SAF services.
D. It can run only in VTAM because the language is tied directly to networking services.

Answer: A

Question: 10

Which is a step that is performed outside SMP/E processing?
Response:

A. Applying SYSMODs
B. Accepting SYSMODs
C. Receiving SYSMODs
D. Compiling and Linking

Answer: D
