Question: 1

In the Toolkit, which flow type is intended to be inyoked by other flows rather than receiving external messages directly?

A. Message flow
B. Subflow
C. Callable flow
D. Integration flow

Answer: C

Explanation:
Callable flows are packaged for invocation from other flows using the Call node; they do not have external input nodes.

Question: 2

Which built-in node is best suited for routing a message based on the value of a specific header field?

A. Filter node
B. Route node
C. Compute node
D. SOAP Request node

Answer: B

Explanation:
The Route node evaluates a mapping expression and directs the message to the matching output terminal.

Question: 3

When would you choose the Graphical Data Mapping editor over ESQL for a transformation?

A. When the transformation involves complex looping logic
B. When the source and target schemas are large and visual mapping aids readability
C. When you need to call external Java classes
D. When you must generate binary output

Answer: B

Explanation:
The graphical mapper provides a drag-and-drop view ideal for large schemas, reducing manual code.

Question: 4

Which parser should be used to read a message thatfollows a custom fixed-length binary format?

A. XMLNSC
B. JSON parser
C. DFDL parser
D. SOAP parser

Answer: C

Explanation:
A custom fixed-length binary format isn't XML, JSON, or SOAP. DFDL (Data Format Description Language) is specifically designed to parse non-XML data like fixed-length, binary, COBOL copybooks, and other custom formats by describing their structure in an XML schema.

Question: 5

Which parser is optimal for handling a SOAP envelope that contains an attachment using M TOM?

A. XMLNSC
B. SOAP parser
C. MRM parser
D. JSON parser

Answer: C

Explanation:
The Message Repository Manager (MRM) parser understands SOAP with attachments (MTOM) and can expose the attachment as a separate message part.
