Question: 1

In Decision Center, which role is primarily responsible for reviewing and approving rule changes before they released to production?

A. Business user
B. Rule Author
C. Administrator
D. Approver

Answer: D

Explanation:
The Approver role review change requests, validates them governance policies, and grants release approval.

Question: 2

Which authentication method can be configured in Decision Center to integrate with corporae LDAP directories?

A. OAuth2
B. SAML
C. Basic Auth with LDAP bind
D. JWT

Answer: C

Explanation:
Decision Center supports LDAP bind Er basic authentication, allowing direct validation of user credentials against an LDAP server.

Question: 3

In the decision governance framework what is the purpose of a "Release" object?

A. To group related rule projects for version control
B. To define a set of activities that move artifacts from development to production
C. To store simulation results for later analysis
D. To user permissions to rule artifacts

Explanation:
A Release groups activities (e.g., development, testing, approval) that collectively move rule artifacts through the governance lifecycle.

Question: 4

When creating a baseline in Decision Center, which of the following is true?

A. It permanently locks the rule project, preventing any further changes.
B. It captures a snapshot of the current rule artifacts for later comparison.
C. It automatically deploys the captured version to RES.
D. It deletes all previous versions of the project.

Explanation:
A baseline records the state of rule artifacts at a point in time, enabling later comparison or rollback.

Question: 5

Which feature in Decision Center allows business users to run a simulation without affecting the live data store?

A. Live Execution Mode
B. Sandbox Mode
C. Test Suite Execution
D. Production Run

Explanation:
Test Suites execute rules against sample data in an isolated environment, leaving production data untouched.
