Latest Version: 6.0

Question: 1

In the Maximo Application Suite (MAS) architecture, which component is responsible for managing container orchestration and scaling of Maximo services?

- A. IBM Cloud Pak for Integration
- B. Red Hat OpenShift
- C. IBM Entitled Registry
- D. MAS Customization Library

Answer: B

Explanation:

Red Hat OpenShift provides the Kubernetes-based platform that orchestrates containers, handles scaling, and manages the lifecycle of Maximo services within MAS.

Question: 2

What is the primary purpose of the IBM Entitled Registry in a MAS environment?

- A. Store custom UI themes
- B. Host licensed container images for IBM products
- C. Manage user authentication
- D. Provide data backup services

Answer: B

Explanation:

The Entitled Registry stores and serves licensed container images (e.g., Maximo Manage) that are pulled during deployment, ensuring compliance with IBM licensing.

Question: 3

When applying custom changes to Maximo Manage using the MAS Customization Library, which command is typically used to rebuild the custom container image?

- A. `smaximo rebuild s`
- B. `'docker compose up`
- C. `'mvn package'`
- D. `smaximo container build s`

Answer: D

Explanation:

The `smaximo container build` command reads the customization library and creates a new container image that includes the customizations.

Question: 4

Which of the following best describes a "server bundle" in Maximo Manage?

- A. A collection of UI widgets for a dashboard
- B. A set of JVM-based services that can be started or stopped together
- C. A packaged set of database scripts for migration
- D. A group of security roles assigned to a user

Answer: B

Explanation:

Server bundles group related Maximo services (e.g., Application Server, Web Server) allowing administrators to start, stop, or scale them as a unit.

Question: 5

To perform a rolling restart of Maximo Manage in a MAS environment, what is the recommended sequence?

- A. Stop all server bundles, then start them simultaneously.
- B. Restart the OpenShift node hosting Maximo.
- C. Sequentially stop and start each server bundle while keeping the others running.
- D. Delete the container pods and let OpenShift recreate them automatically.

Answer: C

Explanation:

A rolling restart stops one bundle at a time, allowing the remaining bundles to serve traffic, thus minimizing downtime.
