Question: 1

How should alert configurations be optimized for proactive monitoring?

- A. Enable alerts for every available metric
- B. Tune thresholds to balance sensitivity and noise
- C. Rely only on default configurations
- D. Disable alerts during peak hours

Answer: B

Question: 2

What is the benefit of correlating user feedback with ZDX data?

- A. Validating reported issues with objective metrics
- B. Eliminating diagnostics
- C. Simplifying configuration
- D. Reducing probe load

Answer: A

Question: 3

When troubleshooting Wi-Fi-related issues, which metric is most relevant?

- A. Application response time
- B. SaaS tenant ID
- C. Packet loss and signal quality
- D. RBAC role assignment

Answer: D

Question: 4

Which practice best supports continuous improvement of digital experience?

- A. One-time configuration
- B. Disabling diagnostics
- C. Iterative tuning based on analytics and incidents
- D. Limiting dashboards

Answer: C

Question: 5

Which ZDX feature enables administrators to monitor cloud-hosted applications without customer-managed infrastructure?

- A. Hosted Monitoring
- B. RBAC
- C. Probes
- D. Inventory

Answer: A

Question: 6

Why is it important to periodically review probe configurations?

- A. To increase alert thresholds
- B. To reduce dashboard complexity
- C. To ensure probes still reflect current user locations and applications
- D. To disable Deep Tracing

Answer: C

Question: 7

During troubleshooting, ZDX metrics show stable network performance but consistently high application response times. What is the most appropriate next action?

- A. Increase alert thresholds
- B. Escalate to the application owner or SaaS provider
- C. Reconfigure probes
- D. Disable Deep Tracing

Answer: B

Question: 8

What insight does Deep Tracing provide that dashboards alone cannot?

- A. Path-level root cause analysis
- B. Alert thresholds
- C. RBAC configuration
- D. Historical averages

Answer: A

Question: 9

What should administrators validate after completing ZDX configuration?

- A. RBAC role names
- B. License consumption
- C. Identity provider logs
- D. Data collection accuracy and alert triggering

Answer: D

Question: 10

Which configuration helps ensure consistent monitoring across regions?

- A. Manual diagnostics
- B. Role-based dashboards
- C. Standardized application and probe configurations
- D. Single-region probes only

Answer: C
