Question: 1

What is a common reason to use a bare-metal hypervisor like ESXi?

- A. To run as a user application inside a browser
- B. To provide efficient virtualization with direct hardware access
- C. To avoid VM management
- D. To remove the need for storage

Answer: B

Question: 2

What is a primary role of a storage controller in an enterprise storage system?

- A. Manage I/O requests and data placement on disks
- B. Convert AC to DC power for the data center
- C. Replace the need for networking
- D. Run end-user applications directly

Answer: A

Question: 3

Which approach best improves resiliency for a single critical server without changing application design?

- A. Disable backups to save time
- B. Remove redundant power supplies
- C. Add redundant power supplies and RAID storage
- D. Run the server without monitoring

Answer: C

Question: 4

Which development most directly improved the ability to scale storage capacity independently of a single server?

- A. Networked storage architectures (SAN/NAS)
- B. Storing all data in CPU cache
- C. Disabling redundancy for performance
- D. Direct-attached storage only

Answer: A

Question: 5

Why do organizations adopt centralized logging and monitoring platforms?

- A. To reduce visibility into incidents
- B. To simplify correlation and faster troubleshooting
- C. To prevent the need for backups
- D. To eliminate the need for access control

Answer: B

Question: 6

Why is RAID not a complete replacement for backups?

- A. RAID requires no disks
- B. RAID only works with tape systems
- C. RAID cannot improve performance
- D. RAID does not protect against logical deletion/corruption or ransomware

Answer: D

Question: 7

A company wants cloud services delivered from its own data center but with a cloud-like experience. The requirement most strongly suggests:

- A. Only desktops with local apps
- B. Tape-only storage with no network
- C. A private/on-prem cloud stack approach
- D. One unmanaged physical server

Answer: C

Question: 8

A service owner wants to meet an SLA of 99.9% uptime. Which action most directly supports the SLA?

- A. Implementing redundancy and tested recovery procedures
- B. Running all services on a single host
- C. Disabling alerts to avoid noise
- D. Removing failover to simplify operations

Answer: A

Question: 9

In a data center, which component is primarily responsible for connecting servers and storage to enable data communication?

- A. Tape library
- B. Heat sink
- C. Uninterruptible power supply (UPS)
- D. Network switches/routers

Answer: D

Question: 10

Drag and drop to match the term to the best description.

Items:

Elasticity

Multi-tenancy

Management plane

Descriptions:

A) Scale up/down based on demand

B) Shared infrastructure with logical tenant isolation

C) Resource provisioning/monitoring/control layer

A. 1→A, 2→B, 3→C

B. 1→C, 2→B, 3→A

C. 1→B, 2→A, 3→C

D. 1→A, 2→C, 3→B

Answer: A
