- ✓ Questions and Answers in PDF Format.

Latest Version: 6.0

Question: 1

Which FortiWeb feature is specifically used to check web applications for vulnerabilities as part of compliance/security hygiene?

Response:

- A. Web vulnerability scan
- B. HA synchronization
- C. SSL offloading
- D. Caching/acceleration

Answer: A

Question: 2

In Active-Passive HA, which two items are most critical to validate during a controlled failover? (Choose two.)

Response:

- A. FortiWeb automatically changes public DNS records for the protected domains
- B. The enforced policies/configuration remain consistent due to synchronization
- C. The passive unit becomes active after heartbeat failure is detected
- D. All backend servers are automatically patched during failover

Answer: B,C

Question: 3

In reverse proxy deployments, what is a common best-practice interface layout for FortiWeb?

Response:

- A. Separate front-end (client-side) and back-end (server-side) interfaces
- B. Only a single interface for all client and server traffic
- C. No interfaces required because FortiWeb is DNS-only
- D. Only a loopback interface is required for traffic inspection

Answer: A

Question: 4

Which two statements align with FortiWeb's schema/ML-based API protection concept?
(Choose two.)

Response:

- A. It combines API discovery and API protection as core functions
- B. It models API behavior using attributes such as method and endpoint/URL patterns
- C. It requires replacing the backend application with a Fortinet microservice
- D. It works only if HTTPS is disabled end-to-end

Answer: A,B

Question: 5

A team enables caching but sees no improvement because responses include Cache-Control: no-store.
What is the most likely explanation?

Response:

- A. FortiAI must be licensed before caching can store objects
- B. FortiWeb caching works only for HTTP/3 traffic
- C. HA must be enabled before caching works
- D. The application headers prevent caching of those responses

Answer: D

Question: 6

Which FortiWeb bot defense approach most directly helps stop simple automated scripts that can't execute browser logic?

Response:

- A. HTTP compression tuning
- B. Backend server health checks
- C. JavaScript challenge
- D. Static route redistribution

Answer: C

Question: 7

A FortiWeb admin wants to ensure traffic reaches an alternate backend if all pool members fail health checks. Where is this behavior typically defined?

Response:

- A. In FortiGuard licensing settings
- B. In web server / server pool definitions that support fallback routing behavior
- C. In the HA heartbeat election settings
- D. In the global DNS resolver settings

Answer: B

Question: 8

Which two outcomes are typical goals of enabling API discovery before enforcing strict API protection? (Choose two.)

Response:

- A. Identify undocumented or newly introduced endpoints from observed traffic
- B. Automatically rotate all backend API keys
- C. Build a baseline of endpoint behavior to guide protection policies
- D. Eliminate the need for server policies entirely

Answer: A,C

Question: 9

If FortiWeb is blocking a legitimate request, which troubleshooting action is the most appropriate?

Response:

- A. Disable all logging to prevent future blocks
- B. Disable the entire server policy permanently
- C. Reboot FortiWeb until the request passes
- D. Identify the specific rule from the attack log and tune/exception it for that case

Answer: D

Question: 10

What is the best evidence that a user-facing error is caused by a backend outage rather than a WAF block?

Response:

- A. FortiAI cannot analyze logs
- B. Attack logs show a high number of signature matches with “Block” action
- C. FortiWeb GUI login fails for the administrator
- D. Traffic logs show forwarding attempts while backend health checks report failures

Answer: D
