Question: 1

During a migration to Autonomous Database, what is the primary purpose of the phase?

- A. To monitor the progress Of the initial Oracle Data Pump imgxyt on the target database.
- B. To validate that the network bandwidth the and target is sufficient for replication.
- C To verify that GoldenGate replication lag is at or near zero before proceeding with the application cutover.
- D. To pause the GoldenGate replication stream to allow for a final consistency check.

Answer: C

Question: 2

In the 'License Included' model for Oracle Database@AWS, what is the primary metric used for billing the database service consumption?

- A. The number Of Databases (PDBs) created.
- B. The total amount of storage provisioned in terabytes.
- C. The volume of data transferred out of the database.
- D. The number of Oracle Compute Units (OCPU) enabled on the VM cluster.

Answer: D

Question: 3

An needs to use a interface to get a list of all Autonomous Databases provisioned an Oracle Database@AWS infrastructure. Which credentials must the administrator configure for their CLI client to perform this action?

- A. AWS IAM user access key and secret key configured for the AWS CLI.
- B. Oracle Database user credentials (username and password) stored in a wallet.
- C. user credentials, including the user OCID, tenancy (EID, and API signing key.
- D. A ticket obtained from a corporate Key Distribution Center

Answer: C

Question: 4

An administrator needs to recover a database on Oracle Database@AWS from a backup due to a logical data corruption event. Which restore option allows them to recover the database to its state just before the corruption occurred?

- A. Restore to the latest available backup.
- B. Restore to a specific, named on-demand backup.
- C. Restore to a specific point in time (timestamp).
- D. Restore using a storage-level snapshot of the database volumes.

Answer: C

Question: 5

For an application on an EC2 instance deployed in the same Availability Zone as the Oracle Database@AWS service, what is the network path for database traffic?

- A. The traffic is sent over the public internet to a service endpoint managed by Oracle.
- B. The traffic is routed from the EC2 instance through an AWS Direct Connect gateway to OCI and back to the database.
- C. The traffic is routed through an AWS Transit Gateway to a dedicated service VPC before reaching the database.
- D. The traffic stays entirely within the secure, low-latency network fabric of the single AWS Availability Zone.

Answer: D
