- ✓ Questions and Answers in PDF Format.

Latest Version: 6.0

Question: 1

A customer is planning migration waves for several applications. One application depends on a shared database and authentication service. What should guide its migration order?

- A. Dependency and service mapping
- B. Random workload selection
- C. Server name alphabetically
- D. Lowest VM size first only

Answer: A

Question: 2

A customer wants a Microsoft platform that supports SQL Server growth and future hybrid services. Which HPE positioning message is strongest?

- A. Isolated server refresh
- B. Fixed legacy platform
- C. Scalable hybrid foundation
- D. No future integration

Answer: C

Question: 3

A customer's migration plan does not include a rollback process. What should the architect recommend?

- A. Disable monitoring alerts
- B. Continue without backout
- C. Delete source workloads
- D. Add rollback procedures

Answer: D

Question: 4

A VMware administrator plans to update HPE server firmware across a production cluster. The cluster runs critical workloads and has limited spare capacity. What should be done before starting the update?

- A. Validate capacity and maintenance mode
- B. Update all hosts at the same time
- C. Disable monitoring during the update
- D. Skip rollback planning for speed

Answer: A

Question: 5

During implementation, a customer asks why workload placement rules matter in a VMware cluster. Which response is most accurate?

- A. They replace storage redundancy
- B. They control resilience and placement
- C. They remove backup needs
- D. They disable cluster policies

Answer: B

Question: 6

A customer is comparing HPE and a commodity hardware option for VMware. The commodity option has a lower initial price but lacks integrated support planning and validated infrastructure guidance. Which factor best strengthens the HPE positioning?

- A. Elimination of the need for VMware lifecycle management
- B. Reduced architectural risk through validated solution design
- C. Guarantee that all workloads require identical configurations
- D. Removal of backup and recovery requirements from the design

Answer: B

Question: 7

A customer needs a VMware solution for a remote site. The site must continue running local services during WAN outages, but central IT still needs operational visibility. Which design approach best fits?

- A. Cloud migration without site review

- B. Central hosting with no local services
- C. Manual servers without monitoring
- D. Local resiliency with central visibility

Answer: D

Question: 8

A customer wants to complete VMware implementation quickly and postpone documentation until after several change windows. What is the best response?

- A. Document design and changes during implementation
- B. Skip documentation until the next refresh
- C. Let each engineer keep private notes
- D. Record only the final host names

Answer: A

Question: 9

A mid-sized enterprise wants to continue using VMware but needs a platform that better supports predictable performance, simplified growth, and standardized support. Which HPE value should be positioned first?

- A. A public cloud migration that removes all on-premises systems
- B. Integrated infrastructure design aligned to VMware workload needs
- C. Standalone servers purchased without storage or network review
- D. A migration plan that excludes current VMware administrators

Answer: B

Question: 10

A VMware cluster is being prepared for production. The implementation team has completed host installation but has not tested host failure, storage path failure, or workload restart behavior. What should be completed next?

- A. Final invoice formatting
- B. Cosmetic dashboard changes
- C. Availability and failover testing
- D. Rack-label replacement

Answer: C
