Latest Version: 6.0

Question: 1

A customer wants to improve write performance for active data while preserving cost efficiency for colder data. Which approach is most relevant?

Response:

- A. Storage tiering
- B. Single slow tier
- C. Unused snapshots
- D. Manual cabling

Answer: A

Question: 2

A customer wants a storage solution for mixed workloads with different recovery requirements. What should the architect collect first?

Response:

- A. Workload service levels
- B. Office floor layout
- C. Report footer design
- D. Monitor refresh rate

Answer: A

Question: 3

A customer has no standard policy for snapshot retention across critical workloads. What should the architect recommend?

Response:

- A. Define protection policies
- B. Use random retention
- C. Remove recovery points
- D. Skip owner approval

Answer: A

Question: 4

A customer is comparing traditional storage procurement with a consumption-based model. Which input should most influence the recommendation?

Response:

- A. Financial model preference
- B. Rack label placement
- C. Conference room size
- D. Keyboard type choice

Answer: A

Question: 5

A customer reports slow application response during month-end processing. Daily average latency appears normal. What should the architect evaluate?

Response:

- A. Peak workload behavior
- B. Average latency only
- C. Rack label format
- D. Monitor brightness

Answer: A

Question: 6

A customer is designing storage for a containerized workload environment. Which storage requirement should be clarified first?

Response:

- A. Persistent data needs
- B. Monitor display size
- C. User seating chart
- D. Report page layout

Answer: A

Question: 7

An architect discovers that a customer's storage array is near full capacity but shows low performance utilization. What should be evaluated?

Response:

- A. Capacity growth trend
- B. CPU clock speed only
- C. Browser history size
- D. Report title length

Answer: A

Question: 8

A customer wants to reduce administrative effort when managing storage lifecycle tasks. Which HPE capability area should be emphasized?

Response:

- A. Automation and management
- B. Manual array tracking
- C. Informal change notes
- D. Unplanned update cycles

Answer: A

Question: 9

A customer is evaluating HPE storage for a workload that requires rapid recovery and long retention. Which area should the architect prioritize?

Response:

- A. Backup and retention design
- B. Desktop wallpaper policy
- C. Meeting room schedule
- D. Printer naming format

Answer: A

Question: 10

A customer wants a storage design for workloads that may move between on-premises and cloud-adjacent services. Which capability should be discussed?

Response:

- A. Data mobility planning
- B. Manual report editing
- C. Isolated host naming
- D. Static desktop layout

Answer: A
