Question: 1

A customer wants to protect the HPE Morpheus Enterprise Software database from single-node failure. Which design approach is most relevant?

- A. InnoDB Cluster design
- B. Single local database
- C. Browser-only backup
- D. Manual report export

Answer: A

Question: 2

After a database failover, the appliance cannot connect to the database. Which component should be checked first?

- A. Console theme setting
- B. MySQL Router status
- C. Report title format
- D. Browser zoom level

Answer: B

Question: 3

An appliance database connection string points directly to one MySQL node instead of MySQL Router. What is the main risk?

- A. Themes become locked
- B. Reports load faster
- C. Logging becomes disabled
- D. Failover may not work

Answer: D

Question: 4

An engineer needs to troubleshoot RabbitMQ authentication failures between nodes. Which item should be reviewed?

- A. Console page layout
- B. Report color scheme
- C. Erlang cookie value
- D. Browser zoom setting

Answer: C

Question: 5

An offline installation fails because the appliance cannot retrieve a required dependency. What is the likely cause?

- A. Incorrect page theme
- B. Missing local package
- C. Browser cache issue
- D. Report color error

Answer: B

Question: 6

A customer asks why a production architecture should not be treated like a simple lab installation. Which response is best?

- A. Production removes database planning
- B. Lab installs always use three nodes
- C. Production needs resilience and operations
- D. Lab installs need more governance

Answer: C

Question: 7

A customer wants to use an external InnoDB Cluster for production. Which operational requirement should be defined?

- A. Database backup ownership
- B. Dashboard image choice

- C. Browser history policy
- D. Report color standard

Answer: A

Question: 8

An all-in-one installation fails shortly after services start. Which source should the engineer check first?

- A. Dashboard color theme
- B. Appliance service logs
- C. Browser tab history
- D. Report footer layout

Answer: B

Question: 9

An engineer is troubleshooting an appliance that fails during startup. The database service is reachable, but one Morpheus service repeatedly exits. Which source should be reviewed first?

- A. Service-specific log file
- B. Dashboard theme setting
- C. Browser window layout
- D. Report footer format

Answer: A

Question: 10

An HPE Morpheus Enterprise Software appliance intermittently loses database connectivity. MySQL Router is healthy, but the cluster shows member instability. What should be addressed?

- A. Browser profile image
- B. Report layout settings
- C. Console icon spacing
- D. InnoDB Cluster stability

Answer: D
