Latest Version: 6.0

Question: 1

A company wants an LLM application to answer questions from internal policy documents that change every week. Which architecture is most appropriate?

- A. Ask the model to infer new policy details from old examples
- B. Fine-tune once using last year's policy documents only
- C. Use RAG with an updated knowledge base and retrieval pipeline
- D. Disable document retrieval and rely only on general knowledge

Answer: C

Question: 2

Which measures help defend against prompt-injection attacks in RAG applications?
(Choose THREE answers)

- A. Treat retrieved documents as untrusted content
- B. Prevent retrieved text from overriding system instructions
- C. Expose hidden system prompts to users for transparency
- D. Allow documents to redefine the assistant's safety policy
- E. Validate actions before external tool execution

Answer: A,B,E

Question: 3

A production model serves sensitive enterprise data

a. Which Alibaba Cloud service category should be used to manage permissions according to least-privilege principles?

- A. Server Load Balancer (SLB)
- B. Object Storage Service (OSS)
- C. CloudMonitor
- D. Resource Access Management (RAM)

Answer: D

Question: 4

Which problem is most likely if a fine-tuning dataset contains conflicting labels for the same type of user request?

- A. The model will stop requiring prompts after training
- B. The model will automatically resolve all label conflicts
- C. The model may learn inconsistent response behavior
- D. The model will become a database synchronization service

Answer: C

Question: 5

Which Alibaba Cloud service is most directly aligned with managed online model serving for LLM applications?

- A. PAI-EAS
- B. CDN
- C. RAM
- D. CloudMonitor

Answer: A

Question: 6

Which RAG component is responsible for finding relevant knowledge passages for a user query?

- A. OSS lifecycle rule
- B. Load balancer
- C. RAM user group
- D. Retriever

Answer: D

Question: 7

Which system-prompt element defines how the model should communicate with users?

- A. GPU memory limit

- B. Vector index size
- C. Tone rule
- D. OSS bucket lifecycle rule

Answer: C

Question: 8

A team wants to identify production issues before users report them. Which capability is most important?

- A. Proactive monitoring and alerting
- B. Manual weekly inspection only
- C. Removing operational dashboards
- D. Disabling log collection

Answer: A

Question: 9

Which design helps ensure that LLM outputs can be used reliably by downstream automation?

- A. Allow a different free-form format on every response
- B. Require structured outputs with validation rules
- C. Remove output schemas to increase creativity
- D. Skip error handling for malformed responses

Answer: B

Question: 10

Which components are commonly part of a production LLM application architecture?
(Choose THREE answers)

- A. Office printer configuration
- B. Manual spreadsheet-only workflow
- C. Monitoring and logging
- D. Model serving endpoint
- E. Application API layer

Answer: C,D,E
