Question: 1

A customer is validating component connectivity after a host migration. Which two items should be tested?

(Choose two)

- A. Hostname resolution
- B. Required port access
- C. Exam topic sequence
- D. Browser theme setting

Answer: A,B

Question: 2

A job fails only when started by a scheduled workflow, but succeeds when started manually by the same operator. Which difference should be investigated first?

- A. Whether the exam duration is still 90 minutes
- B. Whether the operator can open the web console
- C. Runtime context used by the scheduled execution
- D. Whether all old reports can be purged now

Answer: C

Question: 3

A support engineer notices that a task repeatedly fails only when launched as part of a larger workflow. The same task succeeds when tested alone. Which cause is most likely?

- A. The documentation link changed recently
- B. The certification portal is unavailable
- C. The exam registration record expired
- D. The workflow passes different runtime values

Answer: D

Question: 4

A new Agent was installed, but no tasks are assigned to it. The Agent shows as connected. What should be verified first?

- A. Object assignments and allowed execution targets
- B. The number of pages in the study guide
- C. The operator's certification badge status
- D. The web browser download folder path

Answer: A

Question: 5

A workflow uses reusable automation content to call several external services. Which two items should be validated after moving the workflow to another environment?
Choose two answers

- A. Exam passing score
- B. Candidate profile name
- C. Endpoint values
- D. Credential references

Answer: C,D

Question: 6

A customer reports that task execution is normal, but reports are not available for several recent runs. Which administrative area should be reviewed first?

- A. Agent installation package name
- B. Automation Engine exam topic mapping
- C. Operator browser bookmark order
- D. Report storage and retention configuration

Answer: D

Question: 7

A reusable automation component fails after import because required objects are missing in the target client. What should the support engineer recommend?

- A. Ignore missing references until production use
- B. Import or map all referenced dependent objects
- C. Change the exam topic allocation table
- D. Disable all schedules in every client

Answer: B

Question: 8

A TLS Gateway is introduced to support secure communication in the environment. After implementation, some components connect while others fail. What is the best first step?

- A. Compare working and failing endpoint configurations
- B. Remove encryption from every connection immediately
- C. Reinstall all workflow objects in the client
- D. Archive every task report before testing again

Answer: A

Question: 9

A new Agent was installed, but no tasks are assigned to it. The Agent shows as connected. What should be verified first?

- A. The operator's certification badge status
- B. The number of pages in the study guide
- C. Object assignments and allowed execution targets
- D. The web browser download folder path

Answer: C

Question: 10

Which two actions are appropriate before rerunning a failed workflow that updates external records? Choose two answers

- A. Confirm whether partial updates occurred
- B. Review the failure point and reports
- C. Delete all reports before rerunning

D. Restart every server in the system

Answer: A,B
