Question 1. (Single Select)

What is the difference between the spaceship operator (<=>) and the strcmp() function?

A: There is no difference in functionality
B: strcmp() returns a Boolean value, the spaceship operator a number
C: The spaceship operator returns -1, 0 or 1; strcmp() may return any integer
D: strcmp() does a case-intensive comparison, the spaceship operator does not

Correct Answer: D

Question 2. (Multi Select)

Which of these error types may be handled by a user defined error handler function?

A: E_ERROR
B: E_PARSE
C: E_NOTICE
D: E_WARNING

Correct Answer: A, C

Question 3. (Multi Select)

What is the benefit of using persistent database connections in PHP?

A: Ensures that only a single connection is open to the database from PHP
B: Reduces the connection & authentication overhead of connecting to the database
C: Allows connection settings such as character set encoding to persist
D: Allows for resumption of transactions across multiple requests.

Correct Answer: C, D

Question 4. (Single Select)

What is the output of the following code?

A: empty string
