Question: 1

If a new user is added to the OpenStack environment, which module would be responsible for ensuring that the User has the appropriate permissions to access various Cloud resources?

A. Compute (Nova)
B. Networking (Neutron)
C. Identity Service (Keystone)
D. Orchestration (Heat)

Answer: C

Question: 2

What is the main function of the Ceilometer module in OpenStack?

A. To manage virtual machines
B. To provide network services
C. To gather metrics and logs
D. To authenticate users

Answer: C

Question: 3

If a company wants to deploy a multi-tier web application on OpenStack, which modules would they likely utilize, and how would each contribute to the deployment?

A. Only Nova for virtual machines.
B. Nova for virtual machines, Neutron for networking, and Heat for orchestration.
C. Keystone for authentication and Neutron for storage.
D. Heat for orchestration and Keystone for user management only.

Answer: B

Question: 4

If a cloud service provider wants to implement a new feature that tracks resource usage for billing purposes, which OpenStack module should they focus on enhancing, and why?

A. Neutron, because it manages network services_
B. Nova, because it handles virtual machine management
C. Telemetry, because it provides metrics and logs for resource usage.
D. Keystone, because it manages user authentication.

Answer: C

Question: 5

What type of data is characterized by a lack of a predefined data model and is typically stored in OpenStack's Object Storage?

A. Structured data
B. Unstructured data
C. Semi-structured data
D. Metadata

Answer: B

Question: 6

What is the primary function of Ceilometer in the OpenStack cloud computing platform?

A. To manage virtual machines
B. To provide network services
C. To collect and analyze performance data
D. To authenticate users

Answer: C

Question: 7

What module in OpenStack is responsible for managing virtual machines?

A. Neutron
B. Cinder
C. Nova
D. Glance

Question: 8

What is the primary function of the Networking module (Neutron) in penStack?

A. To manage virtual machines
B. To provide networking-as-a-service
C. To handle user authentication
