Question: 1

Which PowerShell command can be used to display all the Citrix services installed on the Delivery Controller?

A. Get-Service -DisplayName *site*
B. Get-Service -DisplayName *citrix*
C. Get-Service -DisplayName *controller*
D. Get-Service -DisplayName *broker*

Answer: B

Explanation:
The PowerShell command Get-Service -DisplayName *citrix* is used to display all the Citrix services installed on the Delivery Controller. This command filters services by their display name to only show those related to Citrix, which typically include various components of the Citrix Virtual Apps and Desktops 7 Deployment and Administration.

Question: 2

Which tool can a Citrix Administrator use to collect information to investigate issues with session performance?

A. CDF Control
B. HDX Monitor
C. Citrix Scout
D. Citrix Health Assistant

Answer: A

Explanation:
CDF Control is a tool that can be used to collect information to investigate issues with session performance. CDF Control allows the administrator to enable and disable tracing, collect trace logs, and analyze them using Citrix Scout or Citrix Insight Services

Question: 3

Which two features within Citrix Director can a Citrix Administrator use to view historical resource utilization for a machine running the Virtual Delivery Agent (VDA)? (Choose two.)

A. Alerts
B. Dashboard
C. Applications
D. Search
E. Trends

Answer: C,E

Explanation:
The Applications and Trends features within Citrix Director can be used to view historical resource utilization for a machine running the VDA. The Applications feature shows the application usage and resource consumption of each application on a specific machine2. The Trends feature shows the historical trends of various metrics such as CPU, memory, disk, and network utilization for a specific machine3.

Question: 4

A user calls the help desk to report that when launching any application from within their published desktop session, it takes a long time and the overall performance is poor.
Which Citrix Director report can a Citrix Administrator use to initiate the investigation of the issue?

A. Machine Utilization in Machine Details
B. Launch Failures in Trends
C. Load Evaluator in Trends
D. Session Data in Filters

Answer: A

Explanation:
The Machine Utilization report in the Machine Details page shows the CPU, memory, disk, and network usage of the selected machine over time1. This can help the Citrix Administrator identify any resource bottlenecks or spikes that may affect the performance of the applications launched from the published desktop session. The other reports do not provide information about the machine's resource utilization, but rather about the user's connection, session, and application launch failures2.
1: Machine utilization | Director - Citrix Product Documentation 2: Troubleshoot user issues | Director - Citrix Product Documentation

Question: 5

Which tool should a Citrix Administrator use when a user reports "event ID 1022: The Citrix Desktop Service Failed to register with any controller"?

A. HDX Monitor

B. VDA Cleanup Utility
C. Citrix Scout
D. Citrix Health Assistant

Answer: D

Explanation:
The Citrix Health Assistant is a tool designed to troubleshoot and resolve common issues with Virtual Delivery Agent (VDA) registration, including event ID 1022.
