Latest Version: 6.1

Question: 1

Which of the following options contains tests that ONLY relate to different input methods?

A. Taking a photo with the camera, using a soft keyboard, printing the content of a screen, using GPS coordinates
B. Dragging an object on the screen, opening another application, capturing of images, sending an SMS to a friend
C. Displaying geo location data, performing distance measurements, using a TV remote app, capturing videos from the internet
D. Swiping to the next screen, double tapping on a button, scanning a QR code, recording audio

Answer: D

Explanation:
Each entry is a way of feeding input to the app: two gestures, the camera used as a scanner, and the microphone capturing sound.

Question: 2

A flashlight app requests access to the user's contacts and photos when it is installed.
Which access-permission test condition does this app fail?

A. The app keeps working when a permission is withdrawn later
B. Permissions are requested only for resources the app needs
C. The app asks the user to grant a permission it needs
D. The app responds correctly when a permission is rejected at installation

Answer: B

Explanation:
An app should request permissions only for resources relevant to its functionality; a flashlight has no use for contacts or photos, so these are broad permissions for unrelated resources.

Question: 3

Which set-up is MOST appropriate for early compatibility checks across various screen sizes and OS versions?

A. Real devices only, bought for each combination
B. Field testing on the carriers' live networks

Visit us at: https://www.examsboost.com/test/ct-mat

C. A usability lab session with representative users
D. A combination of emulators and simulators

Answer: D

Explanation:
Emulators and simulators integrate with development environments and allow quick deployment, and screen size and OS version are easy to vary on them, which suits early stages.

Question: 4

Which of the following statements is true for feature phones?

A. Feature phones are similar to smartphones but bigger
B. Feature phones provide limited support for app installation
C. Feature phones are the next generation smartphones, with extended functionality
D. Feature phones have cameras, GPS and other sensors built in

Answer: B

Explanation:
Feature phones sit between basic phones and smartphones: they offer a built-in browser and only limited support for apps and for installing them.

Question: 5

Why should accessibility testing be conducted?

A. Because it is required by the W3C and the platform providers
B. To determine if the app is usable by users with differing needs
C. To completely test the application
D. As generic test cases exist that must be executed for every application

Answer: B

Explanation:
Accessibility testing determines how easily users with disabilities can use the app, typically by testing it with each of the device's accessibility settings.
