Question: 1

An elevator leaves the first floor of a 25-story building with 3 people on board. It stops at every floor. Each time it comes to an even-numbered floor, 3 people get on and one person gets off. Each time it comes to an odd-numbered floor, 3 people get on and 4 people get off. How many people are on board when it arrives at the 25th floor?

- A. 13
- B. 16
- C. 15
- D. 12

Answer: B

Explanation:

There are 12 even-numbered floors between floors 1 and 25. At each one, the elevator gains 2 people, for a net gain of 24. There are 11 odd-numbered floors between floors 1 and 25 (not counting floors 1 and 25). At each one, the elevator loses 1 person, for a net loss of 11. The elevator leaves the first floor with 3 people, so the total arriving at the 25th floor is $3 + 24 - 11 = 16$.

What number is one half the average of 3, 4, and 5?

- A. 1.5
- B. 2
