Question: 1

What kind of JavaScript code can be used inside Client Actions?

A. Custom OutSystems JavaScript libraries.
B. Regular JavaScript code.
C. JavaScript with inline styles.
D. Special OutSystems JavaScript syntax.

Answer: B

Explanation:
Regular JavaScript code can be typed and executed inside Client Actions in OutSystems.

Question: 2

What is the purpose of the 'Required Scripts' field in OutSystems Modules, Blocks, and Screens?

A. To define runtime paths for scripts.
B. To specify dependencies on other scripts.
C. To define the scope of script execution.
D. To make scripts public.

Answer: B

Explanation:
The 'Required Scripts' field specifies dependencies on other scripts, ensuring proper execution.

Question: 3

Which component in the style guide architecture provides UI patterns and the base theme?

A. Theme
B. OutSystems UI
C. Live Style Guide
D. Base Theme.css

Answer: B

Explanation:
OutSystems UI provides UI patterns and the base theme for consistent styling across applications.

Question: 4

What is required to execute JavaScript within a Block in OutSystems?

A. The Block must include a Server Action.
B. The Block must be set as public.
C. The Block must be instantiated in a Screen.
D. The Block must include a Client Action.

Answer: C

Explanation:
To execute JavaScript in a Block, the Block must be instantiated in a Screen within OutSystems.

Question: 5

What determines the priority of styles in Service Studio CSS Order?

A. The order in which screens are rendered.
B. The specificity of the styles.
C. The order in which styles are listed in the stylesheet.
D. The last style sheet defined in the Block.

Answer: B

Explanation:
In Service Studio CSS Order, specificity determines priority: the more specific the style, the higher the priority.

Question: 6

What is the purpose of the `ApplicationContext` class in OutSystems?

A. To manage active view components and their state.
B. To show validation messages and set their values.
C. To handle events triggered during application load status changes.
D. To provide contextual information about the screen, module, and application.

Answer: D

Explanation:
`ApplicationContext` provides contextual information about the screen, module, and application.

Question: 7

How can you call OutSystems-specific actions in JavaScript?

A. By creating new API modules.
B. By using custom JavaScript libraries.
C. By importing modules into JavaScriptNode.
D. By using the `$public` object and API modules.

Answer: D

Explanation:
OutSystems-specific actions can be called in JavaScript using the `$public` object and its APIs.

Question: 8

Which of the following CSS preprocessors are supported by OutSystems?

A. LESS
B. Sass
C. None
D. Both Sass and LESS

Answer: C

Explanation:
OutSystems does not support any CSS preprocessors such as Sass or LESS.

Question: 9

Which type of style has the highest priority in Service Studio?

A. Inline styles defined in attributes or extended properties.
B. Theme Editor Style Sheet
C. Module Style Sheet
D. System Style Sheet

Answer: A

Explanation:
Inline styles defined in attributes or extended properties have the highest priority in Service Studio.

Question: 10

Why should you avoid using classes with an element selector before the class in OutSystems?

A. To make the CSS more compatible with preprocessors like Sass.
B. To ensure compatibility with all browsers.
C. To prevent conflicts with default OutSystems styles.
D. To avoid increasing specificity unnecessarily.

Answer: D

Explanation:
Using classes with an element selector before the class increases specificity unnecessarily, making CSS harder to maintain.
