Question: 1

A hypervisor vulnerability has been identified, which could expose user data in a critical business application.
What is a crucial immediate action for the IT team?

A. Perform vulnerability assessment
B. Shut down the hypervisor
C. Apply necessary security patches
D. Update the risk register with identified risk

Answer: C

Question: 2

A company is selecting a storage solution to store their backup data and replicas. They need a solution that can protect against data loss due to disk failures within the storage system located in their data center.
Which feature should the company prioritize when choosing their data protection storage solution?

A. Support for Redundant Array of Inexpensive Disks (RAID)
B. Integration with a cloud service provider
C. Automated data discovery capabilities
D. A built-in orchestrator for workflow automation

Answer: A

Question: 3

What type of security control is the swipe card system primarily classified as?

A. Deterrent control
B. Preventive control

C. Corrective control
D. Detective control

Answer: B

Question: 4

A company plans to use data replication to handle backup operations separately from their production storage. They need to identify a backup strategy that minimizes disruption to production system performance.
Which source should they select for their backups?

A. Perform backups directly from the production storage
B. Use the replica as the source for backups
C. Use previous full backup copy as source for new backup
D. Use archive data as source for backup

Answer: B

Question: 5

An organization wants to reduce its backup time and costs.
What should they do with their fixed data before performing backups?

A. Archive infrequently accessed data to exclude it from nightly backups
B. Compress fixed data to reduce its size
C. Store infrequently accessed data on high-performance storage
D. Increase the frequency of backups to ensure data availability

Answer: A
