# Latest Version: 6.0

## Question: 1

What is the primary purpose of groups in DX UIM?

- A. Organizing devices and services for easier management
- B. Configuring SNMP traps
- C. Customizing the user interface
- D. Deploying robots

**Answer: A**

## Question: 2

What are crucial aspects of DX UIM robot configuration and installation?

- A. Ensuring compatibility with existing infrastructure
- B. Properly setting up communication protocols with the UIM server
- C. Customizing the appearance of robots in the console
- D. Determining the frequency and scope of data collection

**Answer: A,B,D**

## Question: 3

Scenario: A network administrator needs to generate a report that includes both real-time performance data and historical performance trends for the last month. They also need to analyze alarm history to ensure network stability.

Which tools in DX UIM should the administrator use to accomplish this?

- A. Configure SNMP community strings and generate alarms manually
- B. Use the Metric Viewer for real-time data and the Performance Report Designer for historical trends and alarms
- C. Set up dynamic groups for each network device
- D. Use the Alarm Console to manually track performance data

**Answer: B**

## Question: 4

Scenario: A service provider has committed to maintaining 99.9% uptime for their client's critical infrastructure. The provider needs to set up DX UIM to track and report on the service performance and ensure that the SLA is met.

What steps should be taken to track SLA compliance?

- A. Configure SNMP traps for each device
- B. Define SLA objectives in SLM and set performance thresholds
- C. Set up custom dashboards for each client
- D. Use the Alarm Console to send real-time notifications for performance breaches

**Answer: B**

## Question: 5

The hub in DX UIM acts as a communication layer between \_\_\_\_\_ and the monitoring environment.

- A. Robots
- B. Dashboards
- C. SNMP Collectors
- D. Custom Probes

**Answer: A**

## Question: 6

In advanced probe configurations, a key aspect is:

- A. Tailoring probes to specific monitoring requirements
- B. Grouping monitored devices
- C. Deploying robots
- D. Customizing the user interface

**Answer: A**

## Question: 7

What is a primary component of the DX UIM architecture?

- A. UIM Server
- B. Customizable dashboards
- C. Advanced alarm configurations
- D. Network interfaces

**Answer: A**

### Question: 8

Which factors are important when understanding installation and sizing for DX UIM?

- A. The anticipated number of monitored devices
- B. Data retention needs
- C. The color scheme of the operator console
- D. The expected volume of monitoring data

**Answer: A,B,D**

### Question: 9

Which SNMP-based probe is used for monitoring device data in DX UIM?

- A. SNMP Collector Probe
- B. Robot Deployment Probe
- C. Dashboard Probe
- D. Alarm Console Probe

**Answer: A**

### Question: 10

Scenario: A network engineer has deployed advanced probes to monitor critical server performance. However, the probe data seems inaccurate, and alerts are not triggering as expected. How should the engineer troubleshoot and resolve the issue?

- A. Create custom SNMP traps to improve accuracy
- B. Review probe logs and verify that the probe thresholds match the server's performance requirements
- C. Create static groups for the servers
- D. Set up custom dashboards for real-time alerts

**Answer: B**
