Question: 1

Which feature characterizes the CA Mobile API Gateway (MAG) enterprise browser?

Response:

- A. It displays a trusted group of enterprise-approved applications on a device.
- B. It enables API developers to grant or deny access to protected APIs based on the physical location of the application user.
- C. It displays a list of WebSocket clients and servers that CA API Gateway can communicate with for inbound and outbound messages.
- D. It enables developers to configure the MAG to communicate with the Apple Push Notification (APN) service and the Apple Feedback service

Answer: A

Question: 2

All OAuth Toolkit (OTK) features are implemented using policies in the Policy Manager. With the Policy Manager, you can customize specific policies. What are some examples of customization?

(Choose two)

Response:

- A. Adding new client keys
- B. Changing token lifetimes
- C. Configuring trusted applications groups
- D. Updating policies to support Oracle database

Answer: B,D

Question: 3

Folders are useful for organizing your services and policies. Which statements about folders are TRUE? (Choose two)

Response:

- A. Only a user with the administrator role can create folders.
- B. The Update Folder role provides the ability to read the update services or policies within the folder.
- C. The Manage Folder role allows a user to create, read, update, and delete services or policies within the folder.

D. Folders can be placed into zones, which will enable a user with the corresponding Manage X Zone role to manage folders that are in the X zone.

Answer: C,D

Question: 4

The CA API Gateway virtual appliance is delivered as an open virtual appliance (OVA) file. What does the OVA file contain?

(Choose three)

Response:

- A. VMware Player
- B. A 64-bit Linux OS
- C. SQL Server 2014 Express
- D. A MySQL enterprise database
- E. The latest Java Development Kit (JDK)

Answer: B,D,E

Question: 5

When you publish a web service using the Policy Manager, you use the Publish Web API wizard to publish an API and:

Response:

- A. RESTful proxies only.
- B. non-SOAP applications.
- C. existing WSDL documents.
- D. web services that require the generation of a new WSDL document.

Answer: B

Question: 6

Why might you use an Evaluate Request XPath assertion?

(Choose two)

Response:

- A. To validate an X.509 certificate context variable
- B. To break a policy into different paths for different types of operations
- C. To help provide preferential routing to unique customers with special considerations

D. To check that HTML form fields appear a minimum number of times or do not appear more than once

Answer: B,C

Question: 7

When you build a RESTful policy, you can use an assertion that can take a single-valued input and convert it to a multi-valued context variable that can be accessed later in the policy.

Which assertion enables you to do this?

Response:

- A. Join Variable
- B. Split Variable
- C. Look up Context Variable
- D. Manipulate Multivalued Variable

Answer: B

Question: 8

You are required to authenticate a user through HTTP Basic Authentication and to ensure that the user is a member of at least one of three different groups.

Which assertion or sequence of assertions should you use?

Response:

- A. Require HTTP Basic Credentials, specifying the list of groups as attributes of the assertion
- B. Three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder
- C. Require HTTP Basic Credentials and three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder
- D. Three separate Authenticate User or Group assertions inside an At Least One Assertion Must Evaluate to True folder and the Require HTTP Basic Credentials assertion

Answer: C

Question: 9

Before you install the CA Mobile API Gateway (MAG), it is important to understand the network zones you will use. Your implementation will use an Internal zone and a DMZ zone.

The zones appear in the Policy Manager. The DMZ zone contains external-facing endpoints and handles user requests coming from the SDK.

What is this zone responsible for?

(Choose three)

Response:

- A. MAG Manager
- B. OAuth test clients
- C. Mobile Single Sign-On (Mobile SSO) protocols
- D. Touchless login using quick response (QR) codes

Answer: A,C,D

Question: 10

In which circumstance do you typically use the Gateway Migration Utility (GMU)?

Response:

- A. When you need to clone an entire Gateway
- B. When you need to migrate policies, services, or entities
- C. When you need to migrate system files such as system.properties or host.properties
- D. When you need to configure Command Line Policy Migration Tool (CMT) mappings using a web browser interface

Answer: B
