✓ Up to Date products, reliable and verified.
✓ Questions and Answers in PDF Format.

Latest Version: 6.0

Question: 1

Which of the following is a key use of predictive AI in industries?
Response:

A. Generating new content like text and images.
B. Forecasting customer demand and market trends.
C. Creating new product designs from scratch.
D. Synthesizing new videos for marketing.

Answer: B

Question: 2

How do snapshots and cloning support AI workloads?
Response:

A. They allow for data replication across systems without impacting performance.
B. They provide version control for models and datasets.
C. They optimize storage by compressing data.
D. They prevent unauthorized access to data.

Answer: B

Question: 3

Which of the following AI workloads benefit from the use of RDMA (Remote Direct Memory Access)?
(Choose two)
Response:

A. Low-latency AI workloads requiring GPU access
B. AI workloads that process unstructured data
C. AI inference that involves large datasets
D. Data transfer and model synchronization in multi-node AI training

Answer: A,D

Question: 4

What is a primary benefit of data aggregation in AI workloads?
Response:

A. It increases the volume of raw data for training models.
B. It helps in combining data from multiple sources to create a unified view for analysis.
C. It enhances data security by isolating data in separate systems.
D. It reduces the cost of storing unstructured data.

Answer: B

Question: 5

Which of the following best describes the difference between data lakes, data warehouses, and lakehouses?
Response:

A. Data lakes store structured data, data warehouses store unstructured data, and lakehouses store only real-time data.
B. Data lakes store raw, unstructured data, data warehouses store structured data, and lakehouses combine the features of both.
C. Data lakes store metadata, data warehouses store transaction data, and lakehouses store archival data.
D. Data lakes store data in cloud storage, data warehouses store it in traditional databases, and lakehouses store it in external drives.

Answer: B

Question: 6

Which of the following best describes the impact of predictive AI?
Response:

A. It enables companies to make decisions based on future predictions rather than past data.
B. It generates new data based on existing information.
C. It enhances customer experience by generating personalized videos.
D. It makes decisions based on historical data without considering future variables.

Answer: A

Question: 7

Which solution helps optimize costs for AI storage and compute?
Response:

A. Data Infrastructure Insights
B. Autonomous Ransomware Protection
C. Snapshot-based storage
D. Manual data management

Answer: A

Question: 8

Which of the following is the primary goal of supervised learning?
Response:

A. To identify patterns in data without labeled examples.
B. To classify data based on labeled inputs.
C. To optimize models through trial and error.
D. To make predictions based on future events.

Answer: B

Question: 9

Which of the following storage architectures are commonly used for AI workloads?
Response:

A. C-Series, A-Series, EF-Series, and StorageGRID
B. NAS systems and cloud storage only
C. RAID storage configurations
D. SAN and DAS systems

Answer: A

Question: 10

Which of the following is an example of AI used in digital twins?
Response:

A. Simulating complex real-world systems in virtual environments to optimize operations and predict outcomes.
B. Automating manual tasks in factories.
C. Predicting traffic congestion in smart cities.
D. Providing personalized content recommendations on streaming services.

Answer: A
