## Question: 1

Which tool should be used to set the coordinate system of a raster dataset that is currently unknown?

- A. Project
- B. Define Projection
- C. Project Raster

**Answer: B**

Explanation:

Reference Topics Covered:

- ArcGIS Pro – Data Management → Defining spatial reference
- ArcGIS Pro – Raster Functions and Georeferencing Workflows
- ArcGIS Pro – Geoprocessing Tool Help (Define Projection vs Project Raster)
- ArcGIS Pro Certification Study Guide – Data Management Domain

## Question: 2

A GIS analyst is trying to conduct overlay analysis using the Union tool but is unable to run the tool due to a red X in one of the parameters.

- A. The input features do not geometrically intersect.
- B. The environment settings for Processing Extent do not include the participating features.
- C. Both input features are not polygon feature classes.

**Answer: B**

## Question: 3

A GIS analyst is trying to do some maintenance and clear up space as it relates to geodatabases while keeping editing capabilities intact.

Which tool should the analyst use?

- A. Compress
- B. Compress File Geodatabase Data
- C. Compact

**Answer: C**

#### **Question: 4**

A GIS analyst has a standalone table that includes the change in population by county and a layer of counties.

Which method should the GIS analyst use to visualize the change using symbology?

- A. Relate the table and layer based on the county field.
- B. Join the table and layer based on the county field.
- C. Add a spatial join between the table and layer.

**Answer: B**

#### **Question: 5**

A GIS intern is examining two feature classes to determine whether there are any differences in the geometry, attributes, and spatial reference.

Which geoprocessing tool should the intern use?

- A. File Compare
- B. Table Compare
- C. Feature Compare

**Answer: C**
